

To: FCC Board Members and Staff

I am writing today about Proceeding 03-104. I wish to communicate my concern about the impact that BPL (Broadband Power Line) services would have on the Amateur Radio Service.

I live in Southern California where power line density throughout the region is high. From what I have read from numerous sources, BPL would have a devastating impact on the Amateur Radio Service rendering HF operation difficult or nearly impossible on almost all HF amateur frequency spectrums.

The Amateur Radio Service is made up of hundreds of thousands of individuals who volunteer in assisting federal and local government agencies and perform public safety services. They also serve our military branches through the MARS service. The Amateur Radio Service has a long history of serving the public interest. It would be a great loss to allow this flawed method of broadband service to impact the hundreds of thousands of individuals who make up the Amateur Radio Service who have for so long loyally served the public interest.

I strongly urge the members of the Commission to return a “**NO**” vote when considering whether to allow the implementation of these types of methods to deliver broadband services.

Sincerely,

Dirk Reschly, CPA, Amateur Radio License N6SUN
